

Turn any electronic lock into a smart lock

Open your gate with your phone from anywhere

Nimbio upgrades any electronic lock into a smart entry point, allowing you to control access seamlessly through the Nimbio app from any location. Whether managing a gate, buzzer building, or secure entry, Nimbio's cellular-based system offers complete access control right from your phone—no WiFi required.

How it Works

Nimbio integrates seamlessly with your existing gate or lock hardware, transforming it into an app-based phone-controlled system. As a cellular internet solution, Nimbio offers flexibility to be installed almost anywhere—no WiFi needed—making it the most cost-effective and convenient choice for modern access control.

Features

- ✔ **Native In-Car Access:** Open your gate directly from your vehicle's dashboard using Apple CarPlay and Android Auto.
- ✔ **GuestView Digital Directory:** Replace expensive telephone entry systems. Visitors scan a QR code at the gate to video-call residents directly on their smartphones.
- ✔ **Easily open your gate with the Nimbio app** from anywhere in the world—no WiFi required.
- ✔ **See Who's At The Gate:** Allow visitor entry with a simple QR code or NFC tap. Residents can initiate a one-way video call directly to a visitor's smartphone for secure, visual verification before access is granted.
- ✔ **Grant and revoke access** to guests, drivers, and service providers instantly from your phone.
- ✔ **Eliminate the risk** of untrackable, shared keypad codes.
- ✔ **No need for clickers or key fobs**, but if you wish to continue using your legacy hardware, it will still work perfectly alongside Nimbio.
- ✔ **Monitor current gate status and view a 24/7 digital log** of exactly who has entered or exited your property.
- ✔ **Flexible hold-open feature** allows administrators to keep the gate open for a set duration or on a recurring schedule.

Secure and nimble access.
